SB-3104

Access Control

Standardize badges, credentials, access levels,
and after-hours entry.

SERIES 3000 • FOUNDATION • V1.0 • FREE PREVIEW

SIMPLE. PRACTICAL. TRANSFERABLE.

Why This Matters

An electronic Access Control System (ACS) turns physical entry into something a mechanical key never could be: individually assigned, instantly revocable, and fully logged. That value only holds up if the system behind it is managed on purpose.

This system is written to work with any Access Control Software platform — Lenel, Genetec, ProWatch, AMAG, and others all perform the same core functions this system manages: issuing credentials, assigning access levels, and logging every door event.

What This System Covers

Credentialing

Access Levels

Provisioning &
Deactivation

Verification

What's Inside the Full System

SB-3104 is a complete 10-section operating system — Policy, Standard Operating Procedure, Roles & Responsibilities, Forms, Checklists, an Audit Tool, a KPI Dashboard, an Executive Summary, and an AI Prompt Pack — built to be implemented, not just read.
