SB-4109

Severe Weather & Shelter-in-Place

A simple, practical foundation for knowing when to shelter and when to evacuate — and making sure everyone knows which one applies right now.

SERIES 4000 • FOUNDATION • V1.0 • FREE PREVIEW

SIMPLE. PRACTICAL. TRANSFERABLE.

Why This Matters

Most emergency plans default to one instinct: get out. Severe weather is the exception — a tornado warning often calls for the opposite response, staying put in the right part of the building until the danger passes.

Severe Weather & Shelter-in-Place gives the organization a distinct, correctly-scoped response: how to monitor for a developing threat, where the designated shelter areas are, how the shelter decision is communicated, and when to transition back to normal operations or Evacuation.

What's Inside the Full System

SB-4109 is a complete 10-section operating system — Policy, Standard Operating Procedure, Roles & Responsibilities, Forms, Checklists, an Audit Tool, a KPI Dashboard, an Executive Summary, and an AI Prompt Pack — built to be implemented, not just read.
