

THE SECURITY BLUEPRINT™

SECUREOPS™

SB-2104

Vendor Security

Decide which vendors earn access, and what security obligations follow them once they have it.

SERIES 2000 • FOUNDATION • V1.0 • FREE PREVIEW

SIMPLE. PRACTICAL. TRANSFERABLE.

Why This Matters

Every facility with outside vendors — a landscaping crew, a copier technician, a company with server-room access — eventually runs into a question no one wrote an answer down for: who decided this vendor was trustworthy enough to be on the approved list, and what did we require of them before we said yes?

Vendor Security is the upstream program that makes that decision on purpose. Visitor Management handles the front door well — badges, escorts, sign-in — but without a vendor security program feeding it, who belongs on the approved list stays an undocumented, inconsistent call.

What This System Covers

Vendor Risk
Tiering

Security Due
Diligence

Access
Provisioning

Ongoing
Monitoring

What's Inside the Full System

SB-2104 is a complete 10-section operating system — Policy, Standard Operating Procedure, Roles & Responsibilities, Forms, Checklists, an Audit Tool, a KPI Dashboard, an Executive Summary, and an AI Prompt Pack — built to be implemented, not just read.
